The Examiner indicated that restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-28, drawn to metal plating apparatus, classified in class 204, subclass 230.2.
- II. Claims 29-34, drawn to a method of forming an equi-voltage surface for plating, classified in class 205, subclass 96.

Further, the Examiner states that the Group I claims are directed to two patentably distinct species of the claimed invention.

Applicants elect the claims of Group I directed to (1) apparatus including a pair of conductive perforated plates electrically connected to each other, without traverse. Thus, the claims that are readable on the elected species and variations for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable include: claims 1-22.

Also, upon the allowance of a generic claim, Applicants wish to re-open consideration of claims to additional species and variations which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141.

The Examiner is urged to call the undersigned at the number listed below if, in the Examiner's opinion, such a phone conference would aid in furthering the prosecution of this application.

Respectfully Submitted,

For: Nakamoto et al.
